~~SENSITIVE BUT UNCLASSIFIED~~  
~~NON-RECORD~~

All,

The one-way push is currently being field tested at sites [redacted] and [redacted]. There are field issues involving the performance between the one-way push and the [redacted]. All parties involved are working to correct and improve the systems performance. In parallel [redacted] testing is soon to begin within the ERF facility. This is a complex and integral part of the overall solution. Upon completion, this functionality shall be field tested as stated above.

b2  
b6  
b7C  
b7E

To date [redacted] field offices have received the one-way push equipment for installation. Twenty sites have completed the install, but not yet activated for connectivity. Remaining sites can expect to receive equipment throughout the year and prepare for installation. Each site shall be informed in advance regarding installation and activation. ERF is committed to minimize both operational risk and system failures. There shall certainly be growing pains as we expand the amount of users incorporating CALEA into the FCI cases. There is a vast number of telco providers and switch vendors that make an exhaustive in-house test virtually impossible. So some point in time, additional sites will be connected in order to field test as needed. We appreciate your cooperation and patience regarding this development process.

Regards,  
[redacted]

OK sorry this took so long

For both Portlane and Anchorage the connection will go threw the ceiling  
As for Denver I've never been there so I've got no drawings for them  
As for Seattle I can only give you the plan there is no space for anything now. What I have is a room that is too small so they are building out a new space for me. The plan is when the new [redacted] goes in I will have [redacted] racks next to it the [redacted] rack will have the unclassified side the [redacted] of the [redacted] will have the class unit. This will not happen until the

OK this is some of the info that may help. What I was thinking is could we put the unclassified side into the VoiceBox Rack and the classified server in the [redacted] rack. the cable that run between would be long but running it will not be a problem. You would not need the [redacted] you sent that way. The second though is put all [redacted] hits into the [redacted] (that would fill all empty slots) and connect the [redacted] you sent to the unclassified computer and wire the classified computer to the [redacted] Talking with Anchorage tech they liked option 1 best

b2

Thanks [redacted] Yes, these details are important to us. The servers [redacted] are [redacted] size and both should installed be in the [redacted] room (FISA). If you already have a monitor and [redacted] witch that will suffice. If a monitor is to be used between classification levels, then we'll need to install a secure [redacted] switch (provided). We can used the rackmount monitor/kybrd/mouse ([redacted] size) that was sent if needed. However, we will need to discuss how long to make the serial cable which goes b/w the LOSIDE server (to DCSNet) and the HISIDE server (to [redacted])

I'll talk to you later. Please fax any drawing that would be helpful. Reminder, the racks must be ablt to accomodate the machines. The rails need to be a min of [redacted] inches apart. If not we would need shelves to mount this equipment. Let me know how we can help.

OK then there is just a few things you may need to know,

space there is very little space in there [redacted] erver room and no space in there server rack. I'll send drawings if you would like.  
air there is only building air in there server/rooms and its running warm already so this too may be a big issue  
power the [redacted] server room has no more outlets so if that is were it needs to go we will have to work things out for this too.

Now when I get back to Seattle I'll give you a call and we can discuss options, if you have any questions please give me a call

As you can tell by this question, I'm in Alaska this week, I see that they have received there equipment for the one way push. Is there anything that needs to be done with this equipment? I'd install the equipment as much as I could but not sure what where and how. If you want me to wait that's fine too. Anyway let me know if there is anything you want me to do with it.

Thanks

OK sorry this took so long

For both Portlane and Anchorage the connection will go threw the ceiling  
As for Denver I've never been there so I've got no drawings for them  
As for Seattle I can only give you the plan there is no space for anything now. What I have is a room that is too small  
so they are building out a new space for me. The plan is when the new [redacted] oes in I will have [redacted] racks next to it  
the [redacted] rack will have the unclassified side the [redacted] if the [redacted] will have the class unit. This will not happen until the  
1st of Dec.

Any questions call

Hi [redacted]

I spoke with [redacted] last week regarding installation/configuration of DCS-3000 One Way push for your FO. I know [redacted]s at a conference, but if possible, I'd like to finalize the install this Wed or Thurs? Will somebody be available to escort me? I understand the equipment has already been installed. Can you tell me how long the custom serial cable needs to be, between the Lowside and Highside machines? I will have to send this out to you when I know what length to make the cable.

b6  
b7C

Also, can you provide me with the following info:

1) I plan to stay near my old neighborhood (Frankfurt Rd/Hillside). There is a motel next door to Tia's on Plano Pkwy/Preston Rd. Do you know the name of this motel? If not, I'll stay at LaQuinta, next door to IHOP on Plano Pkwy. Can you provide me driving directions to the Dallas FO from here. I usually take Hillside or Preston over to I35. I don't recall how to get there.

Thanks for your help, and I'll wait to hear from you. I have a meeting from 11-3 today. I'll check on your response after that.

OK then there is just a few things you may need to know,

space there is very little space in there [redacted] server room and no space in there server rack. I'll send drawings if you would like.  
air there is only building air in there server/rooms and its running warm already so this too may be a big issue  
power the [redacted] server room has no more outlets so if that is were it needs to go we will have to work things out for this too.

Now when I get back to Seattle I'll give you a call and we can discuss options, if you have any questions please give me a call

Hi [redacted]

We plan on visiting the FO some time in Sept to perform the install. Most likely the week of the 13th. Let me know if that sounds okay with you. Is the weather cooperative during this time frame. Talk to you soon.

Regards  
[redacted]

As you can tell by this question, I'm in Alaska this week, I see that they have received there equipment for the one way push. Is there anything that needs to be done with this equipment?  
I'd install the equipment as much as I could but not sure what where and how. If you want me to wait that's fine too. Anyway let me know if there is anything you want me to do with it.

Thanks

Hi [Redacted]

Anchorage - How will the cable be run b/w these systems: under the floor or thru the ceiling tiles?  
Please forward Portland and Denver, and Seattle floor plans when available.

Enjoy the long weekend.

thnx

OK this is some of the info that may help. What I was thinking is could we put the unclassified side into the VoiceBox Rack and the classified server in the [redacted] rack. the cable that run between would be long but running it will not be a problem. You would not need the [redacted] you sent that way. The second though is put all [redacted] units into the [redacted] (that would fill all empty slots) and connect the [redacted] you sent to the unclassified computer and wire the classified computer to the [redacted]. Talking with Anchorage tech they liked option 1 best

Anyway give me a call and we will talk about this

Thanks [redacted] Yes, these details are important to us. The servers [redacted] are [redacted] size and both should installed be in the [redacted] room (FISA). If you already have a monitor and [redacted] switch that will suffice. If a monitor is to be used between classification levels, then we'll need to install a secure [redacted] switch (provided). We can used the rackmount monitor/kybrd/mouse [redacted] size) that was sent if needed. However, we will need to discuss how long to make the serial cable which goes b/w the LOSIDE server (to DCSNet) and the HISIDE server (to [redacted])

b2  
b6  
b7C  
b7E

I'll talk to you later. Please fax any drawing that would be helpful. Reminder, the racks must be ablt to accomodate the machines. The rails need to be a min of [redacted] inches apart. If not we would need shelves to mount this equipment. Let me know how we can help.

Regards,

[redacted]

Hi [redacted]

The following list of accessories pertains to the request I made to you in the hallway. The items below shall help us utilize the remaining DCS-3000 One Way Push machines for CY04. Future systems and accessories should be funded through FY05 budgets (I Hope). If you can provide the funding for the list below, it would be truly appreciated by the SBIT team, as well as myself. Please let me know if you can handle all or any portion of this request.

1) [redacted].com:

~~SECRET~~

~~SECRET~~

[Redacted]

Price = \$329.00 ea. w/free shipping; Total Order = 15 x \$329.00 = \$4,935.00

2) catalog [Redacted] com:

[Redacted]

Price = \$63.95 ea. + S.H.; Total Order = 25 x \$63.95 = \$1,598.75 + S.H.

Total Request = \$6,533.75 + S.H

OK then there is just a few things you may need to know,

space there is very little space in there [redacted] server room and no space in there server rack. I'll send drawings if you would like.  
air there is only building air in there server/rooms and its running warm already so this too may be a big issue  
power the [redacted] server room has no more outlets so if that is were it needs to go we will have to work things out for this too.

Now when I get back to Seattle I'll give you a call and we can discuss options, if you have any questions please give me a call

Hi [redacted]

Looking at the drawings you sent, is the workstation labeled [redacted] the one rack system? If so, It looks like the floor distance b/w the [redacted] and VB is about [redacted], not including the height dimensions. How will the cable be run b/w these systems: under the floor or thru the ceiling tiles? Please remind me when your conference is being held.

Thnx,  
[redacted]

OK this is some of the info that may help. What I was thinking is could we put the unclassified side into the VoiceBox Rack and the classified server in the [redacted] rack. the cable that run between would be long but running it will not be a problem. You would not need the [redacted] you sent that way. The second though is put all [redacted] units into the [redacted] that would fill all empty slots) and connect the [redacted] you sent to the unclassified computer and wire the classified computer to the [redacted]. Talking with Anchorage tech they liked option 1 best

Anyway give me a call and we will talk about this

Hello [Redacted]

We'll be at your office next Thursday (8/26) in order to complete the installs for the One Way Push equipt. Keep in mind that the system will NOT be operational at this time. However, we need to make a custom serial cable, no grater than [Redacted] ft. Below is a description as to how the system is integrated and connected. Please provide me with a best guess as to what size serial cable we need to make for your FO?

The servers (LOSIDE & HISIDE) sent are rackmounted and 1u in size. The LOSIDE (Unclassified) machine must be kept a distance of [Redacted] The HISIDE (Secret) machine typically gets installed in the [Redacted] rack, if space allows for it. Each server is connected to a [Redacted] box and then connected by a [Redacted] cable. This cable is custom built, so we will need to know how long the cable must be between the

LOSIDE and HISIDE machines. Included is a Secured [redacted] switch w/rack mount monitor/kybrd/mouse. Please ensure that the three boxes of equipment already sent are ready for us next week. I hope this helped and I'll talk to you soon.

PS - Please let me know what size to make the serial cable. We will need this cable to complete the install next week.

As you can tell by this question, I'm in Alaska this week, I see that they have received there equipment for the one way push. Is there anything that needs to be done with this equipment? I'd install the equipment as much as I could but not sure what where and how. If you want me to wait that's fine too. Anyway let me know if there is anything you want me to do with it.

Thanks

We plan on visiting the FO some time in Sept to perform the install. Most likely the week of the 13th. Let me know if that sounds okay with you. Is the weather cooperative during this time frame. Talk to you soon.

Regards,

[redacted]

All,  
  
I'd like to try and complete the installation process at your field offices, either next week or the week following. If this works with each of you, please let me know in order to make final arrangements.  
  
Also, if you wish to install the equipment (or already done), please let me know in advance. The equipment should be contained in your FISA collection room and the unclassified server must be keep a minimum distance of [Redacted]

b2  
b7E

The only item remaining to send each of you is the custom built serial cable that goes between both pc servers [Redacted]. Please let me know how long to make these cables, depending on how close your equipment is installed. The maximum length is [Redacted] ft. With that in mind, feel free to call if you have any other questions.

Thnx,

703 [redacted]

PS - Please forward me you field office address, POCs, and phone numbers. Also, if you can recommend where to stay and whether a rental car is needed, please advise. Regards.

We are trying to schedule a visit to your office in order to install the One Way Push equipt. Keep in mind that the system will NOT be operational at this time. The LOSIDE (Unclassified) machine must be kept a distance of [redacted]

The HISIDE (Secret) machine typically gets installed in the [redacted] rack, if space allows for it. The machines are [redacted] size. Each server is connected with a [redacted] box and then connected by a [redacted] cable. This cable is custom built, so we will need to know how long the cable must be between the LOSIDE and HISIDE machines. Included is a Secured [redacted] switch w/rack mount monitor/kybrd/mouse. Do you have rack space for this equipt?

Would a visit be possible for next week? Please let me know what your schedule is and we'll work out the logistics. Talk to you soon.

Hi [Redacted]

Sorry, but I don't have a definitive answer to your question regarding when the One Way Push shall be turned on. We are actively working with the security office to get accreditation. During this process, we are installing the equipt in the FOs to help expedite turn on when approved. It could be several months.

Hope this Helps,

Just a Heads Up:

Soon, you'll be receiving the equipment for the DCS-3000 One Way Push. Please put in a safe location or contact us if you would like to install the equipment in advance. We are unable to activate this equipment at the present time. However, we will be better prepared when the system is turn on by our security office.

If we don't hear from you, we'll be contacting you in the near future to set up a visit to your field office in order to complete the installation process. Thanks for your cooperation and feel free to contact us if you have any questions.

Regards,

[Redacted]

All: You are cordially invited to attend a meeting not yet determined.

Where: ERF  
When: May 3 - 7?  
Time: ?  
Subject: Develop capability to correlate CCC/CDC data for DCS-3000/5000

b2  
b6  
b7C  
b7E

Last Wednesday, I spoke with [redacted] from Raytheon, and discussed the need to develop a sound, reliable solution to correlate the CDC/CCC data for the [redacted] and the DCS-3000. [redacted] will not be available next week, but the following week appears to be open. What day and time is best for each of you during the week of May 3-7? Please send me your requests and make sure that you include more than one choice. I will coordinate what works best for the majority. Thanks so much.

[redacted]  
[redacted] we can definitely get more specifics at our meeting. Is this the direction we wish to go, or are there other ideas? This is what we need to discuss. Please ponder on this. Thanks.

Hi [Redacted]

Well we made it back just in time to enjoy the flaky Northeast weather. Some clarifications regarding discussions from our visit:

b2  
b6  
b7C  
b7E

1) Handling of Criminal Data -vs- FISA data:

Ans) The policy comes from HQ regarding the handling, or separation, of Unclassified Criminal data -vs- Secret FISA data.

[Redacted]

2) [Redacted]

[Redacted]

[Redacted] Thanks.

Hope This Helps,  
[Redacted]

I forwarded all the [redacted] sessions I had for 8/8-9/06 (up through about 1530 hrs) and attached is a copy of the DCS3000 report for this same period. You will see that DCS shows Associated DNs in some sessions and [redacted] does not. You will see that DCS3000 shows more calls than [redacted] reports. Thanks for all you've already done.

Hi [redacted]

Can you forward some sessions to ERF-2 so [redacted] and I can look at both instances? I'll need to know the Line IDs to set up for auto receive from you [redacted] system.

Thnx,  
-ca

To: DCS 5000 Govt POCS Revised: Field Office TS/TA list  
Cc: [redacted] (TD) (FBI); [redacted] (ITD) (FBI); [redacted] (ITD) (FBI); [redacted] (ITD) (FBI)  
Subject: DCS-5000 CALEA into DCS-5000

All,  
Simply put, the One-Way Push (DCS-3000 CALEA - Pen Register Data) into the DCS-5000 [redacted] Collection FISA system is not ready to be connected for field utilization. The memo below was to inform you that field testing is ongoing and that several issues have been noted. Before connecting additional DCS-5000 systems with the One-Way Push system, ERF/Raytheon/Selected Field Offices are working to resolve these issues before asking the field to start using the

b2  
b6  
b7C  
b7E

The one-way push is currently being field tested at sites [redacted] in [redacted]. There are field issues involving the performance between the one-way push and the [redacted]. All parties involved are working to correct and improve the systems performance. In parallel [redacted] testing is soon to begin within the ERF facility. This is a complex and integral part of the overall solution. Upon completion, this functionality shall be field tested as stated above.

To date, [redacted] field offices have received the one-way push equipment for installation. [redacted] sites have completed the install, but not yet activated for connectivity. Remaining sites can expect to receive equipment throughout the year and prepare for installation. Each site shall be informed in advance regarding installation and activation. ERF is committed to minimize both operational risk and system failures. There shall certainly be growing pains as we expand the amount of users incorporating CALEA into the FCI cases. There is a vast number of telco providers and switch vendors that make an exhaustive in-house test virtually impossible. So some point in time, additional sites will be connected in order to field test as needed. We appreciate your cooperation and patience regarding this development process.

Regards,  
[redacted]
