

12.1. LOST VOICE COMMUNICATION PROCEDURES. In the event direct voice radio communications between the UAV pilot and ATC are lost, the pilot will coordinate for the Chase aircraft pilot to relay communications for ATC. If there is no chase aircraft the pilot will set the MQ-1/MQ-9's transponder to code 7600 and the vehicle will continue to operate IAW FAA lost communication procedures. The pilot will then notify ATC by phone that the RPA has lost ATC voice capability and discuss intentions.
