

Steve,

I am good with increasing the operating area and the NOTAM verbiage. The closest airport is at least 15 NM away. The question now is, do I add these to the special provisions to the document or does someone else?

Subject: Fw: Reference COA application (b) (7)(E)

Robert- wanted to follow-up with you to see if you were able to review the proposed change below? Also, the proponent wanted to expand the operational area from 1/2 NM to 1 NM so the site location would read;

from;

(b) (7)(E)
[Redacted]
[Redacted]
[Redacted]

to read;

(b) (7)(E)

Subject: Reference COA application (b) (7)(E)

Robert-

Reviewed the Safety Mitigation Memo "Certificate of Waiver or Authorization for the Federal Bureau of Investigation (FBI) (b) (7)(E) and am requesting the following change to provision number 10 that states;

Notice to Airmen (NOTAM) Requirement. A distance (D) Notice to Airmen shall be issued 48 to 72 hours prior to normal unmanned aircraft operations being conducted. (b) (7)(E)

In addition to the NOTAM, a notice must be placed in the Airport/Facility Directory, advising of the possibility of UAS operations at any time in the Area of Responsibility below 1,000 feet above ground level.

Comment: The time line for the inclusion of a notice into the Airport/Facility Directory is approximately 60 days. Would like to give the proponent the capability to operate until such time that the Notice is published in the AFD. Amend the provision to now read;

Notice to Airmen (NOTAM) Requirement. A distance (D) Notice to Airmen shall be issued 48 to 72 hours prior to normal unmanned aircraft operations being conducted. (b) (7)(E)

In addition to the NOTAM the proponent must place a notice in the Airport Facility Directory (AFD), advising the possibility of Unmanned Aircraft Operations in the Operational Area during the period of time this COA is valid. Until the AFD entry is published, the 48 hour minimum NOTAM requirement remains in effect.
