

The Kentland Farm is the site for our UAV operation. The Kentland Farm is nearly 2,000 acres in size and contains two permanent turfgrass airstrips covering approximately 7 acres [see figure below]. These airstrips are located at the center of the Kentland Farm and will be used routinely for take-offs and landings of the UAV. The airstrips are located on a hilltop offering unobstructed views of the UAV over agricultural fields in the flying area.

The position of the center of our flight paths above agricultural fields is: 80:34.58W and 37:11.58N.

The entire flying area at the Kentland Farm. The UAV will never be more than 2,500 ft from the airstrips (A and B, in white) in any direction. The two UAV turfgrass airstrips are located on a hilltop, offering unobstructed views of UAVs flying over the agricultural fields, seen to the immediate right of the airstrip. There are no main roads or highways near the farm.
